

Quick Audit Report

For **BabyUni**

0xAe13f004b56ddA43000C145b1194865DB64dF3B8

Instruments:

Smart Contract Weakness Classification and Test Cases [SWC-[100:136]]
Common Weakness Enumeration [CWE]
OWASP Risk Rating Methodology

Audit Results

Risk Level:

Weakness

Low

Medium

High

Critical

1

setBlacklist function can be called by the operator to blacklist any address at any time

2

which essentially causes the address owner to be unable to send or sell tokens

3

This essentially makes the token become a honeypot to that address, and makes transferring any native tokens impossible

4

The mint function could be used to premint tokens for dumping

We strongly recommend that BabyUni conduct Full Token Security Audit to ensure trust in the team as they have notable control within the ecosystem
