Critical

The owner of contract can to modify a 'liquidity fee', a 'tokenrewards fee' and a 'marketing fee' to any percentage at any time

The owner can blacklist wallets from purchasing or selling the coins they hold. This might deter investors from purchasing the coin

This might deter investors as they could be wary that these fees might one day be set to 100% to force transfers to go to the owner

This essentially makes the token become a honeypot to that address, and makes transferring native any tokens impossible

We strongly recommend that MiniHoge conduct Full Token Security Audit to notable control within the ecosystem as they have notable control within the ecosystem.
